

MSc Nursing – Part Two Learning Outcomes

Learning journey. This is what you are expected to know or be able to do by the end of Part Two.

Sciences

1. Evaluate normal and altered anatomy and physiology and apply this to the care of the individual and their family.
2. Evaluate and apply the biopsychosocial model and principles that influence health and wellbeing.
3. Interpret and apply the principles of pharmacology to meeting service user needs.

Person Centred Care

1. Appraise my personal and professional development in clinical practice.
2. Apply and evaluate theoretical principles and evidence to the way I demonstrate my ability to deliver compassionate and collaborative person centred care in the achievement of the NMC proficiencies

Understanding Complexity

1. Evaluate key health and social care factors which combine to result in complex health and care needs..
2. Evaluate the contribution of [multi]professional knowledge and skills of assessment and treatment planning for people with complex health and care needs.
3. Appraise how [multi]professional behaviour, values, beliefs, practice and approaches to decision making enables the development of integrated care.

Evaluating Research Methods

1. Review and debate the value research paradigms and methods in the context of a research question related to an area of your practice.
2. Discuss the professional, ethical and practical factors that are relevant to a specific research question in preparation for my dissertation.

Assessment of Practice

1. Demonstrate the professional values, and proficiencies for the delivery of compassionate, person centred care in a team.

MYEPAD Workbook (Portfolio of Evidence)
